

Dean Sanghyuk Seo

A self-motivated team player with a strong intuitive sense who can quickly grasp complex systems and manage tasks independently, while proactively identifying and resolving challenges.

SUMMARY OF SKILLS

- Advanced C++ expertise, including templates, SFINAE and atomic operations
- Strong debugging skills LLDB and GDB in Linux
- Proven experience in resolving ABI issues and symbol visibility challenges
- Hands-on experience with ef_vi APIs with 7000/8000/2000x SF network cards
- Strong CI/CD configuration skills using containerization tools (Podman/Docker)
- Active contributor to DevOps initiatives with proficiency in SaltStack and Chef
- Practical AI experience with LoRA training and running local models in workflows

WORK EXPERIENCE

Balyasny Asset Management, Hong Kong — Engineer (Market Data)

2025.12 ~ Current

- Built a global market feeds delivery system with LSEG
- Migrated a legacy platform to a modern market feed delivery architecture
- Served as the APAC single point of contact for real-time market data production issues
- Single-handedly developed a China market feed application (SHFE/SZE) using TDF

Squarepoint, Singapore — Software Engineer (Order Gateway, Market Data)

2022.07 ~ 2025.12

- Built high-performance trading applications for APAC exchanges (KRX, TSE, HKFE)
- Onboarded onshore Chinese derivative markets (ZCE/DCE/INE/SHFE) using CTP FIX
- Integrated with ASX leveraging OUCH for order executions and ITCH for market feeds
- Engineered uptick-rule implementations to determine SSE(Short-Sell Exempt) in TSE
- Worked on namespace isolation architecture to enhance production reliability
- Configured DMA to capture and archive feeds with SolarCapture for historical analysis

Ingensoma Arbitrage, Singapore — Software Engineer (DMA)

2018.12 ~ 2022.03

- Engineered packet capture infrastructure leveraging Metamako and FMADIO
- Developed trading platform for KOSPI200 Options interfacing in Eurex T7 and CME
- Streamlined DevOps automation processes for VM instances scaling using SaltStack

Samsung Electronics, Seoul, South Korea — C++ Engineer

2018.08 ~ 2018.11

- Developed semiconductor control applications using Qt/C++ in Linux as a contractor

Agoda, Bangkok, Thailand — Software Engineer (Backend Finance)

2017.03 - 2018.06

- Developed unified payment method routing for optimized transaction distribution
- Containerized Windows applications, establishing Docker image distribution pipeline
- Designed and deployed .NET class libraries through TeamCity's CI/CD framework

QMC, Anyang, South Korea — Software Engineer

2015.04 - 2016.09

- Optimized legacy precision laser controller applications using modern C++11/14

Winforsys, Yongin, South Korea — Software Engineer

2011.10 - 2014.07

- Architected MFC-based laser controller applications for Samsung Electronics
